

Elev'Age

Practical User Guide

**Manage.
Understand.
Decide.**

Batches, stock, sales, expenses, customers and performance in one application.

Who is this guide for?

Anyone who wants to manage a livestock operation day by day, with no accounting or technical knowledge required.

Essential workflow

Start with a purchase to create a batch. Then record stock outflows under Movements and costs under Expenses. The dashboard calculates your indicators automatically.

Guide version: September 2026

Contents

- 1** Getting started and signing in
- 2** Understanding the dashboard
- 3** Creating a purchase and batch
- 4** Recording a movement
- 5** Recording an expense
- 6** Managing customers and payments
- 7** Viewing history and batch details
- 8** Analysing performance
- 9** Managing tasks and the calendar
- 10** Settings, language and currency
- 11** Best practices and troubleshooting

Recommended journey

Sign in → Purchase and batch creation → Movements → Expenses → Customers and payments → Dashboard analysis.

1. Getting started

Create an account, sign in and recover your password.

Create an account

- 1 On the sign-in screen, choose Create an account.
- 2 Enter a unique username, a valid email address and a password.
- 3 Confirm the password and submit. Your farm account is created automatically.

Sign in

- 1 Enter your username and password.
- 2 Use the eye icon to show or hide your password.
- 3 Select Sign in.

Forgotten password

Choose Forgot password?, enter the email linked to your account, then follow the instructions you receive.

Security

Never share your password. Sign out when using a shared device.

2. Dashboard

See the condition of your operation at a glance.

The six indicators

Field	Purpose
Total stock	Units currently available.
Revenue	Total recorded sales.
Expenses	Costs assigned to batches.
Margin	Revenue minus the expenses included in the calculation.
Customer balance	Invoiced amounts not yet fully paid.
Performance	Access to rankings and sales trends.

Use the filters

- 1 Choose a species to display its indicators. Only species with at least one batch appear here.
- 2 Then choose a batch for the most detailed view.
- 3 Choose All species or All batches to return to the overall view.
- 4 Use Refresh after entering new data.

Good habit

Analyse a species first, then select a batch to understand the source of a result.

3. Purchases and batches

An initial purchase automatically creates the related batch.

Create a batch

- 1 Open Purchases from the navigation bar.
- 2 Enter a clear batch name, for example "Chickens - September 2026".
- 3 Choose a species from the list.
- 4 Enter the purchased quantity and total price. The unit price is calculated automatically.
- 5 Check the date, then choose Create batch.

Field	Purpose
Batch name	A unique, recognisable name.
Species	Chicken, pig, cattle, eggs, etc.
Quantity	Number of animals or units purchased.
Total price	Total amount paid for the purchase.
Date	Actual date the batch entered the farm.

Important

The complete species catalogue is available under Purchases. A species appears in the dashboard filter only after at least one batch has been created.

4. Movements

Record every stock outflow.

Movement types

Field	Purpose
Sale	Units sold to a customer; updates revenue and the customer balance.
Mortality	Animals lost through death.
Donation	Units given away without payment.
Theft	Units lost through theft.

Record a movement

- 1 Open Movements.
- 2 Choose the movement type and batch.
- 3 For a sale, choose a customer. The “+” button creates one with name, phone number, country and city.
- 4 Enter the date, quantity and, for a sale, the unit price.
- 5 Submit. Stock and indicators are recalculated.

Stock control

The outgoing quantity cannot exceed available stock. Correct the batch or quantity if the application rejects the operation.

5. Expenses

Assign every cost to the correct batch and category.

- 1 Open Expenses.
- 2 Choose the relevant batch. The species follows from the chosen batch.
- 3 Choose a category such as feed, medicine, labour or transport.
- 4 Enter the date, amount and an optional note.
- 5 Save the expense.

Why classify expenses?

Consistent categories show which activities consume the most money and which batches cost the most.

Expenses by category card

First select a species and batch on the dashboard. The card then shows the expense breakdown for that batch only.

Tip

Avoid categories that are too vague. Accurate categories produce more useful statistics.

6. Customers and payments

Track credit sales and payments.

Create a customer

- 1 Open Billing or the customer list.
- 2 Select “+”.
- 3 Enter the name and phone number. Country and city are optional.
- 4 Submit. The customer becomes available for sales.

View balances

The Customer balance card opens a list showing total invoiced, paid and outstanding amounts. Statuses are PAID, PARTIAL and UNPAID.

Record a payment

- 1 Open the customer record.
- 2 Find the relevant sale and batch.
- 3 Choose Pay.
- 4 Enter an amount or select the option to pay the whole balance.
- 5 Submit; the balance is recalculated.

Rule

A payment cannot exceed the outstanding amount. Call and SMS buttons use the phone number saved for the customer.

7. History and batch details

Find every event linked to a batch.

- 1 Open History.
- 2 Choose the batch to review.
- 3 The record displays initial stock, current stock, outflows and total expenses.
- 4 Review purchases, sales, mortality, donations, theft and expenses.
- 5 Use the delete icon only after checking the entry.

Understanding the calculations

Field	Purpose
Initial stock	Sum of quantities purchased.
Current stock	Initial stock minus sales, mortality, donations and theft.
Outflows	Total movements excluding purchases.
Expenses	Sum of expenses assigned to the batch.

Be careful when deleting

Deleting the initial purchase removes the complete batch and its related data. Deleting a sale also corrects the related billing data.

8. Performance

Compare species and identify the best sales periods.

Four key insights

Field	Purpose
Margin ranking	Species ranked from highest to lowest total margin.
Sell-through rate	Share of initial stock already sold.
Monthly sales	Units sold month by month.
Best month	Month with the greatest sales volume for the species.

Use the screen

- 1 Open the Performance card.
- 2 Keep All species selected to compare charts and rankings.
- 3 Select a species to isolate its results.
- 4 Review margin, sell-through rate and best month together.

Interpretation

A high margin with a low sell-through rate may indicate a profitable but slow-moving batch. A high sell-through rate with a low margin may point to low pricing or high expenses.

9. Tasks and calendar

Plan important work.

- 1 On the dashboard, choose a date in the calendar.
- 2 Add a task such as vaccination, feeding, health check, delivery or customer follow-up.
- 3 View today's tasks in the dedicated panel.
- 4 Delete a task when it is no longer needed.

Organisation

Use short, precise titles: "Vaccinate batch P-09" is more useful than "Vaccination".

10. Settings

Adapt the application to your context.

Field	Purpose
Country	Selected from a predefined alphabetical list.
City	Optional free-text entry.
Language	French or English.
Currency	Including CFA franc, euro, Ghanaian cedi or Nigerian naira, depending on the country.

Defaults

Without any change, the application uses French and CFA francs. Language and currency changes apply automatically to supported screens.

11. Best practices and troubles hooting

Keep reliable data and solve common issues.

Best practices

- 1 Create a separate batch for each production cycle.
- 2 Record operations using their actual dates.
- 3 Always assign expenses to the correct batch.
- 4 Create the customer before completing a sale.
- 5 Refresh the dashboard after a series of entries.
- 6 Review batch history and customer balances regularly.

Quick troubleshooting

Field	Purpose
Figures do not change	Select Refresh and check the species and batch filters.
A species is missing	Create a batch for that species under Purchases.
Sign-in error	Check the username, password and internet connection.
Blank or outdated page	Reload with Ctrl + F5 on a computer.
Action rejected	Check required fields, available stock and the outstanding balance.
Persistent error	Note the screen, action and displayed message before contacting support.

Data protection

The online version stores data in the backend. Do not share your credentials, and sign out on devices you do not own.

You are ready to use Elev'Age

Create your first batch, then record each operation as it happens. Your indicators will gradually become a powerful decision-making tool.

The 6-step cycle

1. Purchase • 2. Batch • 3. Movement • 4. Expense • 5. Payment • 6. Analysis
